Magni HTH 30.12 with pin hook attachment

Following the announcement in May that Riwal had been named as the distributor for Magni Telescopic Handlers in Poland, its machines have been officially shown for the first time in the country at an exhibition.

The debut took place at the international exhibition for the road construction industry Autostrada-Polska where Riwal displayed the compact RTH 5.23 Smart model equipped with Stage IV Final Deutz engine. The new model sits between the 21 m and the 25 m units in the range.

“Our machine was welcomed with interest and curiosity and got a good response from the public because of some individual features like full visibility pressurised cab with 100% inlet air filtration,” said a Magni spokesman.

The machine is also equipped with an intuitive and dynamic touch screen, said the manufacturer, and is designed to offer a good balance between compactness and performance.
