ACCESSFEATUREDMATERIAL HANDLING

*Written in partnership with All Lift Forklifts and Access Equipment*

As of April 2019, established material handling and access equipment dealer, All Lift Forklifts and Access Equipment is bringing world-leading telescopic handlers to Aussie customers. As Australia's official and exclusive Magni Telescopic Handlers dealership, this is exciting news for anyone looking for machines that reach higher, lift more and use advanced tech to do it.

All Lift Forklifts and Access Equipment Managing Director, Dean Kretchmer, spoke to Machines4U about the partnership with Magni and these revolutionary Italian-made telescopic handlers.

"We are thrilled to partner with the Magni brand and offer our customers these unique telehandlers that have taken off in the American and European markets.

They bring new innovative features the industry hasn't seen before.

They have a brand new design with integrated diagnostics, touch-screen control display and a full-visibility cab. Magni only use quality parts and components, so it's no wonder they're currently the #2 telehandler brand in sales worldwide for the RTH models already." Dean added.

With All Lifts' national footprint, tech support, factory-trained technicians and spare parts—they have you covered.

## Magni: A Game-Changer in Telescopic Handlers

Available in both 360-degree rotational and rigid options, these telehandlers have patented designs that make them leaders in their class.

*"The big game-changer for these machines is their use of new technology. You get in the seat and there's an iPad screen next to you that shows load charts automatically for every attachment you put on the machine. It has diagnostic screens plus a whole bunch of features for the operator."*

This technology includes:

- User-friendly touch screen display for driving, customisation, stabilisation, load chart & basic commands
- Touch-screen to control & manage all aspects of the machine
- More than 170 written fault messages (in 8 languages)
- Integrated diagnostics for simple troubleshooting
- Movement cut technology when breakdown occurs
- Custom driver settings, which are saved for up to 4 different operators

## Magni Telescopic Handler Key Features

Dean explained these machines suit people looking for versatile equipment that can do the job of many other machines.

*“These telehandlers are so efficient, they can reduce or even eliminate the need for other machines on a worksite. Depending on the project, other machines like tower cranes, rough-terrain cranes, forklifts and EWP’s could be replaced by a Magni telescopic handler.”*

Key features include:

- Lift capacity up to 50 tonnes (HTH Series)
- Max reach up to 46 metres—a world first (RTH Series)
- Levelling systems to adapt to slopes

“Combined with their massive max reach of up to 46 metres and a lift capacity of up to 50 tonnes, Magni telescopic handlers easily outperform the competition with similar models in the market,” said Dean.

## Models & Specs
