

PR AGRITECHNICA 2025

Innovation and performance for modern agriculture

MAGNI TH is preparing to be one of the leading protagonists at **Agritechnica 2025**, the world's foremost trade fair for agricultural mechanisation and innovation.

The spotlight will be on the **new THA range of agricultural telehandlers**, which consists of **eight models** designed to meet the productivity, safety and comfort needs of operators in the sector.

In addition to those already unveiled at the end of 2024, three models will make their world debut: the mid-range THA 3,5.7 and THA 3,5.9, along with the THA 5.8 L for more demanding operations.

THA 3,5.7 and THA 3,5.9: a pair designed to meet every need:

The THA 3,5.7 and THA 3,5.9 combine **compact size** with **outstanding performance**, offering a **maximum load capacity of up to 3,500 kg**.

Designed for **small and medium-sized farms**, as well as for work in confined spaces, these two new THA models offer:

THA 3,5.7

- Two-speed **electronic hydrostatic transmission** for precise and progressive speed control.
- A **reversible fan** for efficient operation even in enclosed and dusty environments
- A **new configurable shortcut keypad**, which allows key functions to be customised according to operator preferences
- A **spacious cab** that sets a new standard in its class for interior roominess
- **The LMI (Load Moment Indicator)** safety system for continuous load capacity monitoring and complete safety
- **Front and rear LED headlights** ensuring efficiency and safety in all conditions.
- **True off-road performance** thanks to dedicated tyres

THA 3,5.9

THA 5.8 L: power and endurance for the first "Loader" version model

There is great anticipation surrounding the **THA 5.8 L**, the flagship model of the Magni TH range. Engineered to deliver exceptional performance even under the toughest conditions, the THA 5.8 L is equipped with a **125 kW (170 hp) FPT engine** and a **fully reinforced boom head**, capable of handling **buckets with a capacity of up to 4,500 litres**.

A solution that combines strength and reliability, ideal for operators on **medium to large farms** or in the **recycling sector**, where efficiency and productivity are essential. To complete the operating experience, the model offers:

- A **suspended cab**, significantly reducing vibrations transmitted to the operator and improving comfort during long working hours
- A **reversible fan**, facilitating the easy removal of dust and debris from the ventilation surface
- **Air conditioning as standard**, ensuring maximum operator comfort in all weather conditions.
- Durable, vibration-resistant **LED headlights** providing optimal visibility in all environments

The Magni THA range: eight models based on one philosophy

THA 5.8 L

The THA range consists of **eight models** designed to meet every operational requirement of farms and material handling businesses alike: from the compact THA 3.6 to the powerful THA 5.8 and THA 5.10, each machine embodies a perfect balance of **power, safety and comfort.**

With the introduction of innovative technologies and efficiency-driven design, Magni TH reaffirms its commitment to delivering **increasingly advanced, high-performance agricultural machinery.**

Technology, versatility and safety

The entire THA range is conceived to provide **maximum versatility** without compromise. Each model is designed to adapt perfectly to a wide variety of operational needs, with an **extensive selection of rear tow hooks** available in both **fixed and rotating versions**

Standard on all models with a load capacity of 4.5 and 5 tonnes, the **rear hydraulic outlets** further enhance the THA range versatility, enabling a **broad selection of attachments** to be operated quickly and safely.

Activation is **straightforward**: a **dedicated blue selector** switch on the **control panel** allows instant access to the function in any working situation.

On request, even the most compact models, THA 3,5.7 and THA 3,5.9, can be equipped with **optional** hydraulic outlets.

The **Magni TH** agricultural range can also be fitted with both **pneumatic** and **hydraulic trailer braking systems**, which can be installed separately or **in combination**.

This option ensures **maximum safety and compatibility** with different trailer types, while providing **superior control, stability and driving comfort**, even for the most demanding applications.

Finally, all **4.5 and 5 tonne** models are available with a **retarder function**, designed to ensure the **highest levels of safety and control** even on challenging terrain.

This system allows for **smooth, reliable downhill driving**, using engine torque to reduce strain on the braking system.

It is yet another demonstration of **Magni TH's** steadfast commitment to combining **performance, safety and operator comfort** at the highest levels.
